Sofia, Bulgaria

Attn.: To whom it may concern

I am writing the present letter in the position of Professor in Software Engineering at Sofia University "St. Kliment Ohridski", Bulgaria, on behalf of Kristiyan Stoyanov, regarding his future applications for positions of internship fellow or junior software developer.

I know Kristiyan from our communications within the Bachelor Program in Software Engineering at the Faculty of Mathematics and Informatics. He was among the top 10% of students and is a person to remember thanks to his active participation in discussions, good knowledge in the field of software engineering, and excellent skills in modern technologies and programming especially C#/C++ and SQL. Within the course "XML technologies for Semantic Web" (in the winter semester of the academic year 2020-2021) he developed an excellent course project concerning the design and implementation of a 3D first-person shooter video game in Unity 3D, with customized gameplay through XML settings. In addition to the requirements of this project, he designed and developed a flexible inventory system for the video game. His project was outlined among the others through a good and flexible system architecture and user interface design and, thus, will be integrated into an experimental software platform for a generation of educational maze games in the scope of the APOGEE research project (<http://www.apogee.online/index-en.html>).

In conclusion, I would like to state that Kristiyan Stoyanov possesses excellent abilities for abstract thinking and decision making, good knowledge in software engineering, experience in object-oriented languages and information technologies, and outstanding communication and presentation skills. Thus, I recommend accepting his further application for positions of internship fellow or junior software developer.

Sincerely:

/Prof. B. Bontchev, PhD,

Vice-Dean of Fac. of Math and Informatics,

Sofia University "St. Kl. Ohridski"/
